

Midland Cabinet Company

Fine Custom Cabinetry & Millwork Since 1965

YOUR STYLE

Since 1965, Midland Cabinet Company has created rooms and special spaces that reflect the lifestyles and aesthetics of clients seeking the best in fine cabinetry and architectural millwork. Your style, your design, custom engineered to fit.

YOUR DESIGN

Whether we work directly with homeowners or through their architect, contractor, or interior designer, the result is the same: plans rendered as specified. Our industry reputation extends to expert design development and process engineering.

CUSTOM MADE

*E*verything Midland builds is custom made, as desired and required by our clients and their team of design professionals. We know that one size never fits all homes or all families.

Why Custom?

Like a fine handmade suit, custom cabinetry is made to order and to fit. With custom work, there are no ironclad rules about standard sizes or shapes, the wood you choose, or the finishes and hardware you use. We fabricate cabinets and all our wood products in-house, exactly as ordered: We do not stock pre-made cabinetry.

Midland makes all its products locally in San Carlos, California, which means our cabinetry is free from a range of toxic chemicals banned by California, such as formaldehyde. Our finishes are low in VOCs, also meeting California's high standards. Buy smart, buy local: Cabinets made and shipped from out of state do not need to follow California's safety and environmental requirements.

PRECISION ENGINEERING

Most custom cabinet companies outsource their manufacturing. We build our products in-house at our own fabrication facility, a 23,000-square-foot, fully computerized shop with state-of-the-industry equipment. Together with an outstanding team of master craftsmen, Midland can guarantee that every dovetail, every joint and reveal, every line of grain in an architectural veneer is precision engineered and hand-crafted. The quality shows in the final product, inside and out.

Our premium woods and fancy-faced veneers are handpicked for evenness of color and grain. We mill restoration timber and reclaimed wood for architectural details, and we have long offered clients wood products certified by the Forest Stewardship Council.

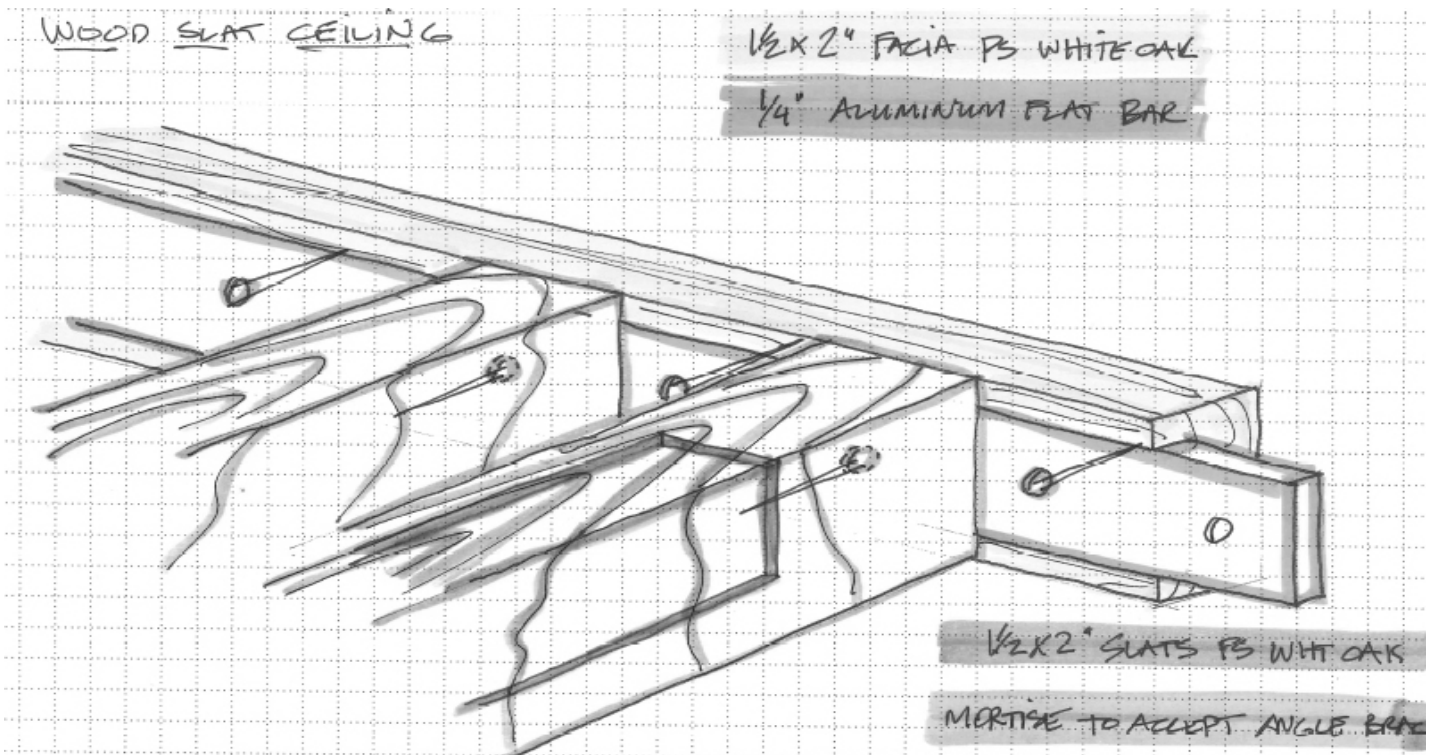

Midland stands behind its products. We service our customers for the lifetime of their cabinetry.

DESIGN DEVELOPMENT

Design development means just that: developing your designs to ensure that they look and function according to concept. This is the nuts-and-bolts technical phase, during which Midland goes over every detail, from floor plans and elevations to materials and architectural elements, doing so through our lens as product designer and manufacturer.

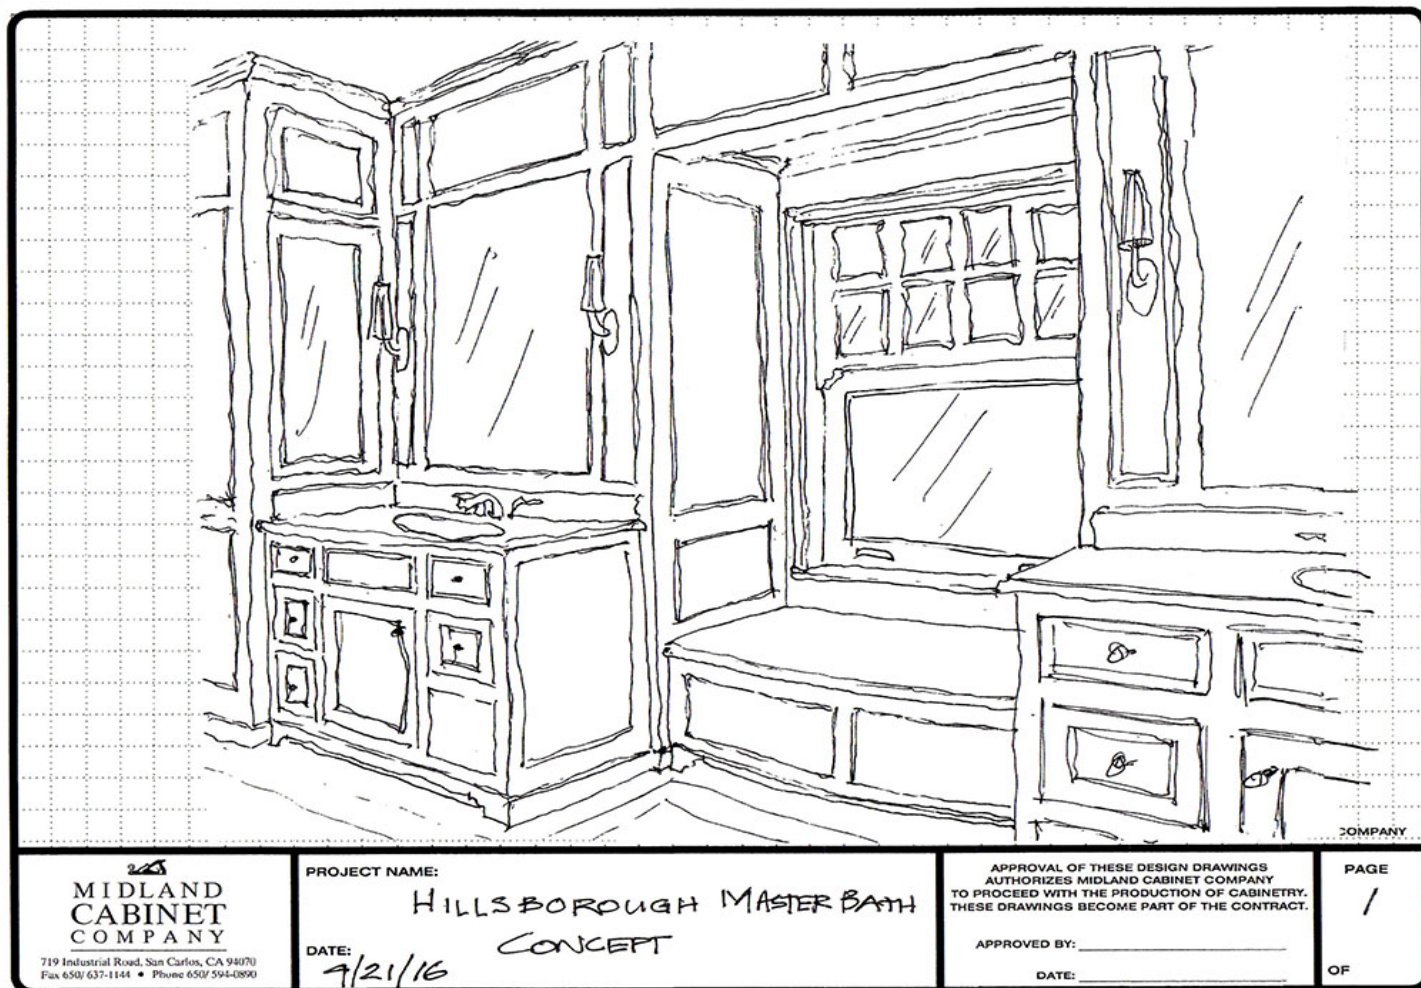

Jeb Boynton

We appreciate and care about your vision. Design development is the engineering road map to making it a structural reality.

Design Development Is How We Ensure Structural Integrity

Our design development process takes architectural concepts to the next level: engineering. Shown above, Midland's specifications for building and installing a latticed ceiling element requested by the architect.

For Midland, design development focuses on the technical side of production. For clients, it offers a better view of what's to come.

Rob Boynton

Sometimes a sketch is worth 1,000 technical terms. We also provide 3D renderings. Both are the means for fine tuning the big picture: your special space.

DESIGN . BUILD . INSTALL

Founded in 1965 by Robert P. Boynton, who is joined today by son Jeb, Midland Cabinet is a family-owned and -operated high-end custom cabinetry and millwork company respected throughout the industry for its quality products and uncompromising service.

Midland designs and builds cabinetry and millwork for individual homeowners throughout Northern California and beyond. It has a longstanding relationship with leading architects, interior designers, and contractors, who call on Midland when a project requires a trusted partner for design development and custom fabrication.

Midland's expertise covers all cabinetry styling and specialized architectural details. We offer custom, hand-applied finishes and use a two-part catalyzed conversion varnish known for its long-term durability. We work with only the best American-made and French-imported hardware, and we craft specialty, traditional, and contemporary pulls, including those made of wood.

Midland installs its own products to guarantee that quality standards are met, from the beginning of a project to its close. It is our mission to support clients through all phases of their project — design, scheduling, production, finishing, installation, and finally, warranty and repair work.
